Thank you for your interest in
GoGold Resources Inc.

Whether you are a seasoned
resource investor or new to junior
exploration, GoGold presents a
very unique opportunity for your
consideration.

We appreciate your taking the time
to review our information and we
hope that it will assist you with your
due diligence efforts. If you have
any further questions, please contact
us. We look forward to hearing from
you.

Terry Coughlan, B.Sc., P.Geo.
President and CEO

Getting Results in Mexico

GoGold Resources Inc. (TSX-V: GGD) is a Canadian based mineral exploration company with properties in Mexico and Canada. The company's management team are veterans of raising capital and developing properties into successful producing mines. CEO - Terry Coughlan and Strategic Advisor - Brad Langille developed the Ocampo Mine which is one of the largest gold/silver mines in Mexico. The members of the senior executive have raised hundreds of millions of dollars in capital markets to bring mines into production.

GoGold crew with the first core sample from Breccia Hill Target, San Diego Property

GoGold geologists have interpreted the geology of the 70,000-hectare San Diego project as containing both high and low sulphidation mineralizing systems within an andesitic volcanic complex with several potential porphyry complexes underlying a structural corridor measuring 35 kilometres long by 10 kilometres wide. Several mineralized structures, alteration zones, intrusive phases and related breccia zones outcrop on the property. In addition to the gold and silver potential of the project, potential exists for large tonnage porphyry targets as demonstrated by the wide copper and molybdenum drill intercepts at Breccia Hill.

Highlights of Drilling

Drill Hole	True Width (m)	Gold Eq.* (g/t)
GG11	84	2.43
GG9	70	1.47
GG7	40	1.00
GG1	54	1.05
GG2	100	0.92
GG5	95	1.48

*Silver/Gold ratio of 46:1 used for Gold Equivalent. (Metallurgical recoveries and net smelter returns are assumed to be 100%)

Fully Diluted Shares	63.5 Million
Warrants Outstanding	221,666
Insiders & Major Shareholders	35.4 Million

GoGold's San Diego Project

Current Activity - Advancing the Property

The Company is preparing a 3,000 metre drill program on the Chispa De Oro target as soon as the drill sites are completed this month. Our geological team believes that the Chispa De Oro alteration zone is a high sulphidation system based on rock mineralogy and field observations. With significant results of gold and silver on surface, Chispa De Oro has become a high priority target for drilling. Recent mapping within the Chispa De Oro area has extended the area of interest to three kilometres by one kilometre. Exploration within the Chispa area is now focused on the southern portion of this high sulphidation system where it is believed the principle feeder system exists within a large oxidized alteration zone containing widespread disseminated gold and silver. The Chispa De Oro area shares many similarities with other high sulphidation epithermal gold and silver deposits around the world, including Yanacocha and Tukyari in Peru, some of the largest gold deposits in the world. Further work and diamond drilling on other selected targets elsewhere

Chispa De Oro - 3 km x 1 km High Sulphidation System

Location of the San Diego project in relation to other mines in the Sierra Madre Occidental Gold-Silver Belt. The table indicates current reserves.

on the San Diego project are also planned for the upcoming months. Our goal is to demonstrate the potential of this large unexplored region (for more information on the Chispa De Oro target, please see the Company's press release dated August 10, 2011).
